

One for more..

Top Performance Desktop Virtualization Solution

thinXtation is a cost-effective solution committed to top performance and high flexibility. It also enables you to choose smartly how to allocate your I.T budget according to the ever-dynamic needs of your organization.

Powered by:

softxxexpand™

thinXtation offers solution that are adapted to different types of users. Each solution is designed to provide added-value for niche-specific implementations. thinXtation is used in many sectors, including educational institutions, banks, libraries, call centers, internet cafes, hotels and others.

Think PERFORMANCE

With its unique up-and-coming virtualization technology which enables resource sharing, thinXtation maximizes the full power capacity of each PC you own. As with a standard PC, your desktop content is protected by folder access rights, private user IDs, and customized access details. Each workstation supports standard software applications, high screen resolution, multimedia sound, full-motion video, and heavy graphic applications – all in a highly reliable, high-speed processing environment which maintains a seamless user experience.

Think SAVINGS

Reduces TCO "Total Cost of Ownership"

With fewer computers, you can significantly reduce your initial purchase costs, minimize maintenance time and expenses, and cut down on the electricity needed to power and cool your machines. With thinXtation, you can save on purchase costs, maintenance, and on total energy consumption.

Supports Your IT Environment and Decreases Maintenance Costs

Finding a way to maximize computational power is a goal many companies have set to achieve. thinXtation enables you to maintain one host computer that can manage up to six connected workstations (once install does it all policy). Hardware and software installed on the PC are shared, and upgrading involves replacing only a single computer. In fact, thinXtation Reduce maintenance costs by 80%.

Think GREEN

thinXtation marks a new generation of Green IT. With fewer computers, you consume less energy, cut down on CO2 emissions and reduce e-waste. Furthermore, thinXtation requires a fraction of the amount energy needed to produce that same amount of standard PC's

Think DURABILITY

thinXtation is a hardware and software solution built to withstand any ground and pound applications known to IT industry. With its durable components from processor, mother board, video card, memory, hard drives, power supply, keyboards to mouse. Durability means less worry and hassle free computing.

Think FLEXIBILITY

thinXtation offers you the best desktop virtualization solution that meets your needs today – hardware specification is your only limitation. thinXtation can sustain even your most robust performance requirement when you need it, where you need it. The secret lies with its adaptive capability that allows you to personalize or even upgrade your PC components from monitor, hard drive, processor, memory to operating system.
